Professional Summary

Software Engineer with 2 years of experience developing enterprise backend applications using ASP.NET Core, ASP.NET MVC, C#, SQL Server, Entity Framework Core and Dapper. Experienced in REST API development, SQL optimization, production support, Azure Service Bus migration, TeamCity, Octopus Deploy and Azure App Service. Strong experience implementing business-critical features within enterprise hospitality applications while collaborating with Business Analysts, QA teams and Agile development teams.

Technical Skills

Languages	C#, SQL, LINQ
Frameworks	ASP.NET Core, ASP.NET MVC, Entity Framework Core, Dapper
Backend	REST APIs, JSON, XML, Dependency Injection
Database	SQL Server, Stored Procedures, Query Optimization, Performance Tuning
Messaging	Azure Service Bus, RabbitMQ
Cloud	Azure App Service
DevOps	Azure Repos, Git, TeamCity, Octopus Deploy
Tools	Visual Studio, SSMS, Swagger, Postman, Jira
Methodologies	OOP, SOLID Principles, Agile Scrum

Professional Experience

Software Engineer June 2024 – Present
Coforge Ltd. Greater Noida

- Developed and maintained enterprise backend applications using ASP.NET Core, ASP.NET MVC, C#, SQL Server, Entity Framework Core and Dapper.
- Designed and enhanced RESTful APIs supporting hotel booking, supplier integration and inventory management workflows.
- Implemented business modules including Generic Criteria, Offer Codes, Inventory Management and Virtual Card Audit (VCC).
- Participated in migration of RabbitMQ messaging infrastructure to Azure Service Bus by validating publishers, consumers and end-to-end message processing.
- Optimized SQL Server queries, stored procedures and backend business logic to improve application performance.
- Executed production deployments using TeamCity and Octopus Deploy across multiple environments including deployment validation.
- Investigated and resolved production issues through SQL analysis, XML response validation, API debugging and application log investigation.
- Worked with Azure App Service for deployment, monitoring and production support.
- Collaborated with Business Analysts during requirement discussions, sprint planning, story estimation and feature implementation.
- Participated in code reviews, bug fixing and continuous improvement initiatives to improve application quality.

Enterprise Project

Enterprise Hotel Booking Platform

Enterprise-scale hotel booking platform supporting hotel availability, booking, inventory management and supplier integrations for global travel partners.

Technologies

ASP.NET Core, ASP.NET MVC, C#, SQL Server, Entity Framework Core, Dapper, REST APIs, Azure Service Bus, RabbitMQ, Azure App Service, TeamCity, Octopus Deploy, Azure Repos.

Key Contributions

- Developed backend APIs supporting hotel booking and supplier integration workflows.
- Implemented Offer Codes, Generic Criteria, Inventory Management and Virtual Card Audit (VCC).
- Participated in RabbitMQ to Azure Service Bus migration.
- Optimized SQL Server queries and backend business logic.
- Supported production deployments and post-release verification.
- Resolved production defects through SQL debugging and API analysis.
- Supported production releases by validating deployments and assisting in post-deployment issue resolution.

Education

Bachelor of Technology (B.Tech) in Computer Science & Engineering

GLA University, Mathura 2020 – 2024

Key Achievements

- Successfully contributed to the migration of enterprise messaging from RabbitMQ to Azure Service Bus.
- Delivered backend features including Offer Codes, Generic Criteria, Inventory Management and Virtual Card Audit (VCC).
- Supported multiple production deployments using TeamCity and Octopus Deploy.
- Optimized SQL Server queries and backend business logic to improve application performance.
- Collaborated with Business Analysts and QA teams during requirement analysis, sprint planning and production releases.
